NEXT Black Sea Basin

BSB00464 Regular project

Smart4Rural

**Smart and innovative solutions for green and
clean rural areas in Black Sea Basin**

Overview

The project aims to support resilience and improvement in rural areas by introducing innovative solutions to biodegradable waste recycling/composting, build long-term capacity for composting promotion, and increase awareness through environmental educational programs and engagement in environmental protection activities.

Road Ahead

- Training programme, study visit, workshop and a guide to share the best practice on innovative and green approaches for accelerating capacities of rural communities
- Educational programme for schools for promoting the information regarding smart and friendly solutions in environment
- Joint educational platform to provide local rural authorities, farmers, practitioners, and other stakeholders with knowledge on recycling and composting
- International Academy of Eco-Innovations for Youth in Georgia to develop best eco-smart ideas with mentor support
- Joint activities including organizing cleanup actions, an International Festival on Rural Composting, a Joint Green Camp for youth to engage rural populations in environmental protection
